Introduction

As customer, we have reviewed and validated the Requirements Document ver. 2.0 made by group C for the Foorder system. The result is seen in the table below.

The review was carried out using the checklist provided in the requirements document. For each problem that we found, we have stated which of the points in the checklist that were violated and tried to come up with a solution. For some of the requirements, problems were found that we couldn't map to any of the points in the checklist, but we included them anyway. Finally, we ranked every improvement suggestion for criticality on a scale from C to A, where A is the most critical.
